

Training Workshop

★ Fundamentals of paleo-proxy methods ★

University of Cambridge
September 28-30th 2009

Calling all non-specialists

Looking to develop a better understanding of sedimentary
and geochemical based proxies?

or

simply want to bridge the gap between climate models
and paleo-reconstructions?

Our workshop will consist of a number of lectures,
demonstrations and “hands on” experience in the use and
application of routine and ‘novel’ foraminiferal,
coccolithophore and sediment proxies.

Interested? The workshop is open to all students and researchers involved in ocean acidification research. Numbers are limited and priority will be given to PhD and early stage postdoctoral researchers, particularly those associated with the EPOCA project. Please contact Viven Brown, vivien@esc.cam.ac.uk by the **1st June** to register. Participants are expected to cover their own travel, accommodation and subsistence costs. For more info go to www.epoca-project.eu
